TO WHOM IT MAY CONSERN:

To whom it may concern this is my first day of practicing how to type faster.

Lesson one , I should be able to know which key l am pressing in my mind.

Lesson two, l should be able to learn and master each keyboard key in my mind like a virtual keyboard in my mind.

Lesson three, l should take a sample file hardcopy and try to enter every detail on it as fast as I can then see if there are any errors on my typed document.

Note: I am not saying or implying that l am a bad typer its just that l want to improve my typing speed.

Lesson four, I will now put to practice what l have learnt and try to make a simple program in Microsoft Visual Studio 2019 Proffesional Addition.
